

FOR MEN, WOMEN & PREGNANT WOMEN
DETOXIFICATION SERVICES

www.sacredheartcenter.com

Sacred Heart Rehabilitation Center is dedicated to assisting all people with behavioral health issues, including those with limited means, to improve their quality of life.

Sacred Heart addresses the need for safe, medically monitored detoxification that stems from the dangerous physical symptoms that can accompany withdrawal. Depending on the nature of the drug of choice, the pattern of use and the medical history of the client, withdrawal can be traumatic to critical body functions and systems. We can treat the symptoms of withdrawal in a safe environment that is equipped and staffed for the effective management of those symptoms. Providing these necessary elements we can assist a client in completing a safe detoxification.

DETOXIFICATION SPECIALITIES

At our main campus in Memphis, we offer a variety of detoxification services. Sacred Heart operates a physician-directed sub-acute detoxification unit with nursing and laboratory support. In this program we can provide specialized opiate detoxification services (including methadone detoxification), using protocols incorporating the use of methadone or buprenorphine (in the formulation of Suboxone), where appropriate.

In addition to medical services provided during detoxification, these clients will have access to our residential treatment services. Clients will have access to a certified therapist who will conduct group therapy, individual therapy and interactive group didactics covering a variety of topics. A therapist will also meet with the client to discuss continuum of care options. Resi-

dential treatment orientations are also offered to detoxification clients whom are moving onto the next level of care, to ensure a comfortable transition.

Sacred Heart has an emphasis on movement of a client across a continuum of services in multiple levels of care. Sacred Heart coordinates with the providers of subsequent levels of care for clients completing any of our programs to assure continuity in the treatment process.
